This 2.1 channel speaker set is designed to work with your TV and video components, such as a DVD player or VCR. It even comes with a universal remote control, so that you can control all of your entertainment devices with a single remote. Its easy to use and easy to setup, too. Thats right, no confusing installation with the CineMate. It comes with intuitive oneway connectors, so youll be enjoying that multichannel sound in no time. Order the Bose CineMate Digital Home Theater Speaker System today! Equipped with two front speakers and a compact Acoustimass module, this Bose speaker system facilitates easy installation with just four intuitive connections. Moreover, you can experience your favorite shows come alive by connecting with this stereo speaker system to your TV. Thanks to the proprietary TrueSpace digital processing circuitry, this Bose speaker system reproduces clear and distortionfree sound aided by its audio channels. What's more, you can listen to clear, soft sounds in a movie, as the powerful Bose Cinemate speaker supports the digital dynamic range speaker compression circuitry. Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average.

The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. The CineMate is the perfect unit to add theater sound to an office, bedroom, or apartment where a larger, more powerful system is not realistic due to space or sound output requirements. The CineMate is simple and straight forward to setup. As with any system, location of the speakers is important. Locate the small front speakers to the sides of the TV screen, the subwoofer placement is not critical more later, but because the amplifier and audio connections are located in the subwoofer, it must be placed fairly close to the TV unless you use longer cables from the audio out of the TV and then you are still limited by the length of the speaker cables which have custom connectors molded on. The front speakers provide sharp, accurate sound, the bass is good without being over powering. No, you arent going to feel the bass in your gut, but then this system was never intended to do so. Several reviewers were disappointed with the bass response; even though subs are nondirectional, their output can be influenced by several factors within the listening area. Try turning the sub unit, sliding it further way from a wall or closer to it. It was supereasy to set up, too. The hardest part was just getting it out of the box and that was easy!. Anyway, the sound quality is nice and a huge jump from the regular TV sound which its a DLP and the sound is okay, but this just gives it a much nicer quality. Also, for the price you cant beat it, considering its a Bose. We also have the 7speaker system and although the sound is better on that, youre not paying a few grande for this set. I totally recommend this for those who dont have the money to chunk down on a bigger set, or for those like us who dont have a good floorplan for running surround sound in this room.

There are plenty of good reviews already, I just wanted to highlight 2 things 1 if you use a Samsung BDP2500 1080p Bluray Disc Player or, presumably, any Samsung Bluray player the universal remote

pause button does not function. 2 ignore the folks who say that, since this isn't driven by your digital output, this is not a worthwhile system. I have a Bose 321, in ear headphones, radio, speakers in my SUV and just recently the Cinemate system. The Bose Cinemate theater speaker system is a must have if you want to upgrade the sound of your TV, DVD and or VCR output. There is ease of setup and operation with sound worthy of comfort in any small room. I have mine hooked up in my bedroom. I have not heard complaints from my neighbors as yet, but I've noticed that my wife has begun to crank up the volume as well. Once the system is set up there is nothing to do but to turn it on and off as desired. The television speakers are turned off during setup, so your equalizer settings of your TV provide the desired Bass and treble. I have had to reduce the base and volume settings while listening to some CDs, but other than that I just turn it on as needed. An interesting feature is the universal nature of the remote when correctly setup. One can control other devices with the Cinemate remote. Pick one up and be prepared for a pretty lively room. I realize in many ways this is poor praise for such an excellent system which is a supplement to a TV speaker. So this system is a blessing. I did not seek exceptional reproduction of TV but to listen normally and not miss the blurred sounds. It does the job. Bose is a great telephone information and help company. They actually hold your telephonic hand. AWESOME, ACCURATE, sound !! All I can say about those that are giving this a negative rating is that they must NOT be able to follow directions or have a lame set up to begin with. If you want great accurate sound this is for you. The Bose Acoustimass simply kicks ass when called upon.

I should have read the specs more carefully. Had a difficult time setting it up. Had to purchase a converter box converts analog RCA cables to optical cable. Box worked fine. I wish the woofer provided more base. Used GoodIt comes complete with the remote which works. The remote will not have batteries. There are minor cosmetic flaws such as a couple minor scratches on the unit. This unit will ship out within 1 business day. Please try again. Please try again. Please choose a different delivery location. Ideal for small to medium sized rooms. Two powerful yet compact Gemstone speakers provide wide, immersive sound, while a hideaway Acoustimass module delivers deep notes for a more dramatic home theater experience. The system connects easily to your HDTV, and you can control all your entertainment sources with a programmable universal remote. Gemstone speakers are the smallest, most powerful 2.1 channel speakers from Bose. Gemstone speakers The smallest, most powerful 2.1 channel speakers for a CineMate system. Patented Gemstone speaker array design works in concert with TrueSpace digital surround processing circuitry to deliver the exciting depth and resonance of home theater sound.

Acoustimass module Patented Bose design produces low frequencies for all channels, with no audible distortion. Small size allows you to place it out of the way, so the sound seems to come directly from Gemstone speakers. The Acoustimass module works in concert with the small speakers to deliver the full range of home theater sound. Proprietary TrueSpace digital processing circuitry Delivers a spacious, multichannel sound experience with strong center imaging from just two visible speakers and a hideaway Acoustimass module. Interface module Houses two LED indicators and connectors for your audio input. Universal infrared remote Delivers seamless system operation and controls most video components attached to your TV. Easy system setup Just four simple connections—eliminates the guesswork of more complex systems. The interface module front and

back views receives infrared commands for your system. It has connectors for your audio input and connects directly to your TV. Videostage 5 decoding and postprocessing circuitry Proprietary technology, combined with digital 5.1 decoding, delivers a high quality, multichannel surround sound experience from DVDs, CDs and MP3 discs. Product Dimensions CineMate GS II speaker arrays 2.5 x 5.5 x 4.1 inches; 1.0 pound Acoustimass Module 14.5 x 8.8 x 19.1 inches; 23.3 pounds Interface module 1.1 x 3.3 x 2.2 inches; 0.99 pounds Shipping dimensions 12.88 x 19.63 x 24.25 inches; 31.58 pounds The CineMate GS system delivers a level of realism that cant be matched by TV speakers alone. Designed to optimize listening. Groove in tubing conceals wire, provides easy access. Horizontal and vertical adjustment to control sound direction. Sold as a single bracket. Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness.

Please try again later. Jeff G 5.0 out of 5 stars A solid job by the people at Bose, I am impressed. I simply have nothing bad to say. Ive moved several times and unfortunately things fall in a lot of those processes, so Ive dropped them and they handled it great. The speakers still look fairly new in spite of being handled. The remote still responds very well. The sound is still incredible. So much more than I could have expected and I will eventually replace this with another Bose. A great way to enjoy what ever audio you want to really enjoy. BravoTakes up very little space and if found for the right price a good catch. Once you do other better products starts to come into the picture. This model has been replaced so expect it to drop in price. If you miss the holiday prices be patient through the first two quarters of next year. Should drop. Head over to my you tube channel and check out all my other videos.Ive had friends who spend a lot more and get a separate receiver and speaker system. But this one worked just right for my living room. Assembly was not very difficult although keep in mind that you need to fund a right spot for the receiver as the receiver needs to be kept around 3 feet away from the TV and since my TV is wall mounted I had to keep the receiver on the floor. But once this was set up and I turned the speakers on my family was thrilled with it. It had a very nice surround effect as well as when you turn the bass to full or even halfway the effects are amazing. We watched a 3D movie with this and the sound effect with the bass on full were excellent. The biggest plus with this was with the Universal Remote it comes with. I wanted to buy a Universal remote and instead of buying a separate one from Logitech I decided to use this one that came with Bose. And it worked great paired well with my Panasonic TV, Panasonic Blu Ray and Xfinity.

Only item it could not pair with was Roku Player wish they come up with some firmware upgrade to make that work but I know thats not possible. For 1 flaw can I really take a star away. Nah.Its a rockstar of a speaker system and 5 stars for that.Extremely easy and quick to connect and the sound is fabulous. I heard so many more sounds from everything I watched and especially movies. I had no problems or complaints with the sound or lack of sound watching blue ray movies. It was suggested I hook it up through my tv, not the cable box. Did not notice any flatness or lack of quality In sound by doing this. I am very pleased and glad I purchased it. Well worth the money. I would recommend to anyone. I also bought the speaker stands and glad I did. Very happy customer.Thanks, Bose! The sound coming from these little speakers is nothing short of amazing. Crisp. Clean. You hear everything; even a leaf blowing across the road. As for the sub, it is so powerful, you dont even need to turn it all the way up before it rattles your house. Surprisingly, you can increase the volume of this entire system without any distortion. The sound will envelop you. Also, its a snap to set up and operate. The universal remote is the easiest Ive ever set up and used. Be sure to purchase the Monster M850 DFO8 MSeries 850 Toslink Fiber Optic Audio Cable 8 feet to connect to your television, as it is noticeably better than the audio cable that comes with the set. And dont forget the Monster MON129340 iCable 1000 for iPod and iPhone. Your music will come through stunningly clear; as if your listening room becomes a live recording studio. Also, the Bose stands are a mustbuy to fully appreciate what this system can do. But If you enjoy watching television and listening to

music half as much as I do, you will consider this as one gift that keeps on giving and giving. A truly extraordinary listening experience! Not sure why there's any difference the systems look the same but there is.

Maybe it's the room acoustics to be charitable!. Too bad Bose hasn't found a way to integrate the speakers with the tv better e.g. there's no visual indication, either onscreen or on the speaker hardware, what the current volume setting is. They could have put a display on e.g. the central control box to show the volume. I bought Bose because of the form factor don't like the look of the current crop of sound bars. The sound is OK and the form factor works for me. But the product has a lot of room for improvement in details. We had the opportunity to declutter our living room electronics recently so I replaced our old Yamaha amp and sound bar with this CineMate GS Series II. Combined with our XFINITY Comcast DVR and we truly have a home theater now. Everything sounds so much better. The one thing I didn't figure out was how to get the DVR 30sec skip function to work on the included remote. This was disappointing. If someone knows please reply. So I'm still using my Logitech Harmony Ultimate because it programmed the 30second skip with zero effort on my part. The bigger the better, it seemed. The sound from this set is simply amazing. We normally listen at a regular volume and the sounds are crisp and clear. The sound does seem to fill the room. For those nights where we feel more like Movie Night, we crank up the sound and get the theatre experience without the sticky floors and texting neighbours. The sound is deep and when I show these off, people are surprised at the sound that comes out of such small speakers. Well done Bose! Sorry, we failed to record your vote. Please try again Blown away awesome Extremely high quality sound for such little speakers. I am still amazed how Bose does this. These speakers tuck away nicely and sound so good. This is an example of how something so small can be so big. Big things in a small package Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote.

Please try again The quality of sound is fantastic Sorry, we failed to record your vote. Please try again Love the system, definitely would recommend, Sorry, we failed to record your vote. Please try again You need a good compact system This is it. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Would certainly recommend. Sorry, we failed to record your vote. Please try again Then I got the Champion series 5 for my gaming desktop and played all night longgggg for any gamer it's paradise. As soon as I looked at Boses various home theater systems which are available including reviews and price range. I went to a local retailer and had a look at Bose GS Series II Digital, tried the demo and was amazed 2 single speakers which produce 5.1 sound. After that saved some money up and now I GOT IT!!! the set was quite easy simple step by step, as soon as I was finished I turned it on. And speechless work perfectly as intended. Anyway to anyone who may read this here is a few simple tips, don't buy it at full price unless you're willing to spend the money. Wait for it to go on sale. 2 you may have or not have heard this system does not support DTS if you own a BluRay player, you have to go on your main audio player settings and switch it to PCM. In order to use this system with your BluRay plz note switching the settings will not affect the sound quality. Other than that playing Xbox 360 with this Bose system EPIC and anything else. If you're looking for a lower price range go for the Bose Cinemate Series II It's just the first gen model same performance sound. Sorry, we failed to record your vote. Please try again. It can be easily hidden in a corner or out of view, yet the sound seems to magically come from the Gemstone speakers.

The Gemstone speakers provide a full frequency range for realistic audio that puts you right in the middle of your favorite movies, games, and music. The system is equipped with Boses proprietary TrueSpace technology, which delivers a spacious, multichannel sound experience with strong center

imaging without the need for additional speakers and wires. The system also includes a universal remote control, which controls the speaker system, as well as most electronic components connected to your TV. The system consists of the Bose Acoustimass module and a pair of Gemstone speaker arrays. The Acoustimass module provides deep low frequency sounds. Acoustimass Module The Acoustimass module works in concert with the small speakers to deliver the full range of sound. The patented design produces low frequencies for all channels with no audible distortion. Let us know YOUR RECENTLY VIEWED ITEMS Browsing History ON Clear History Not responsible for typographical or illustrative errors. I use this in my kids TV room, and their DVDs and Netflix always sound astoundingly good. The bass module houses three power amplifiers and the magic DSP that reproduces 5.1 sound from the two small speakers. The TOSLINK input decodes 5.1 if you want. The CineMate system sounds fantastic for cinema, with exceptional dialog clarity, enveloping spatial sound and strong, clean bass.

You can spend a lot more and get a lot less! It sets up in seconds. Plug the woofer into the wall, plug the remote receiver cord into the woofer and place the receiver under your TV. Put each main speaker on a shelf on either side of your screen, and plug the speaker wires into the back of the woofer. Plug either a stereo RCA cord or a TOSLINK cable from your TV or player into the back of the remote receiver, and youre done. I dont bother. It has the tiny remote control. As expected, the CineMate II system is voiced perfectly for cinema. Voices are extremely clear, making it easy to hear subtle nuances in dialog. Rearpanned sound doesnt usually go behind you, but its still far better than any sound bar Ive heard. Its voiced like many cinema venues. It plays superloud and has great bass, but its not great for HiFi eyesclosed careful music listening. It has some distortion audible in much of the range on pure tones, possibly added deliberately as part of the efforts to clarify dialog, and the voicing isnt great for serious music — but if youre having a party, it runs circles around any iPod dock. It covers the complete traditional music range evenly. Bass notes are wonderfully distinct, each with its own pitch and they sound staccato detached and separate if played staccato. This is much better than many other home subwoofers that just boom the same note all the time due to too much resonance. I pop the speakers close to the side walls, far away from my screen, for the widest sound. Bose suggests not letting them get too far away from your screen. In any case, leave the speakers pointed straight ahead, dont point them towards the center of the room. Bose intends for the sound to bounce all over. The CineMate automatically selects whichever youre using either the stereo RCA inputs or the TOSLINK connector. Bose is generous, but you will need to provide your own TOSLINK cable if you use one.

To switch among different sources, feed your CineMate from your TV or other device that selects what youre watching. If this source also controls the volume, you could turn up the volume with the CineMate remote and then use only your main remote. Therefore you always have to use the Bose remote control to set the volume or turn it on or off, meaning you now have one more remote control to have to find just to change the volume. Therefore, I prefer the tiny remote that I can understand. I dont know about you, but I dont have a weekend to spend stringing wires, bolting speakers to the wall and screwing around with a hundred idiotic menu options on a receiver just to get it to sound right. I just plugged in our CineMate, and it sounds great! The CineMate is ideal for just installign and enjoying big sound immediatly. Im not NPR; I get no government handouts and run no pledge drives to support my research, so please always use any of these links for the best prices and service whenever you get anything. Thanks for helping me help you! Ken. It costs you nothing, and is this
